

Tag-in-Roll solution for automatic linen manufacturing machines

The JYL-FL UHF Textile Laundry Tag is designed to withstand the rigors of industrial laundering, including high-temperature sterilization and ironing. Operating on global UHF frequencies (860–960 MHz) and compliant with EPC Class 1 Gen 2 (ISO 18000) standards, it enables rapid, bulk-reading capabilities from several meters away.

To maximize production efficiency, these tags are available in a Tag-in-Roll format. This roll-fed design mimics standard care labels, allowing automated machinery to handle the RFID insertion process with zero manual intervention. While this high-compatibility format integrates seamlessly with most commercial linen manufacturing systems.

Product info

- 500 tags included
- Compatible with most linen manufacturing machines on the market
- Comparable to our [JYL-FL7015-T / JYL-FL7010-T](#)
